Uninstalling WordPress

Wordpress · https://umw.domains/guides/uninstalling-wordpress/

There are many reasons as to why you would want to uninstall a WordPress application. This can be to save storage space on your domain or you have an old site you no longer want to use.

Step 1: Selecting the Application to Be Uninstalled

In cPanel, under the **Applications** section, click on "My Apps"

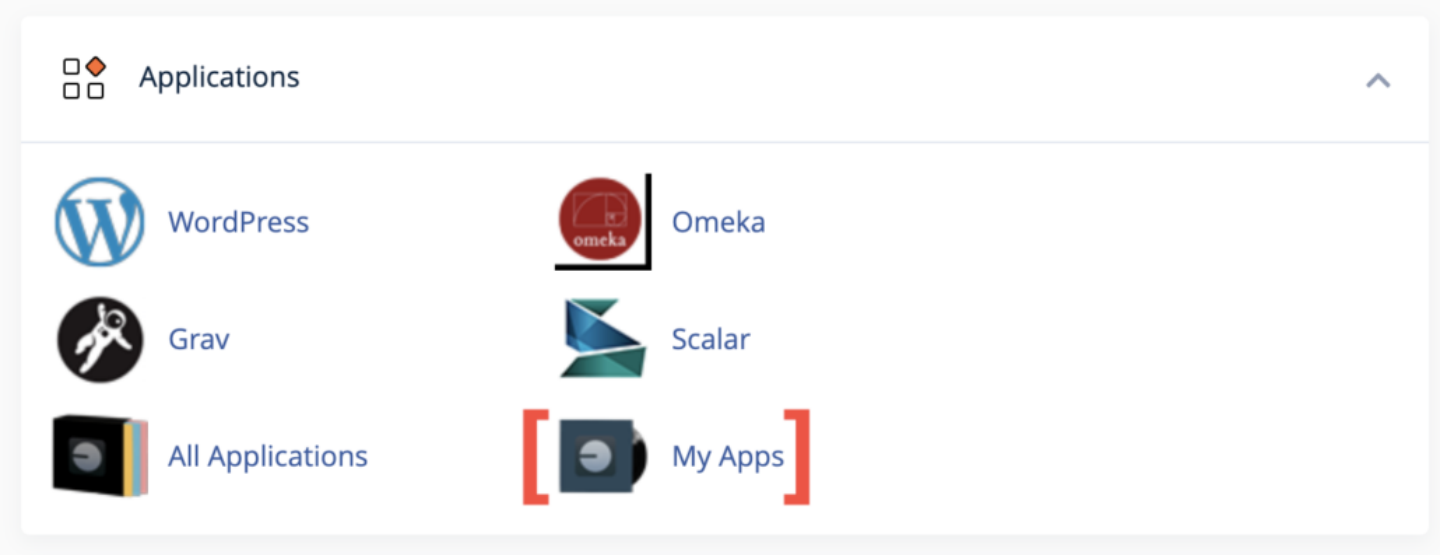

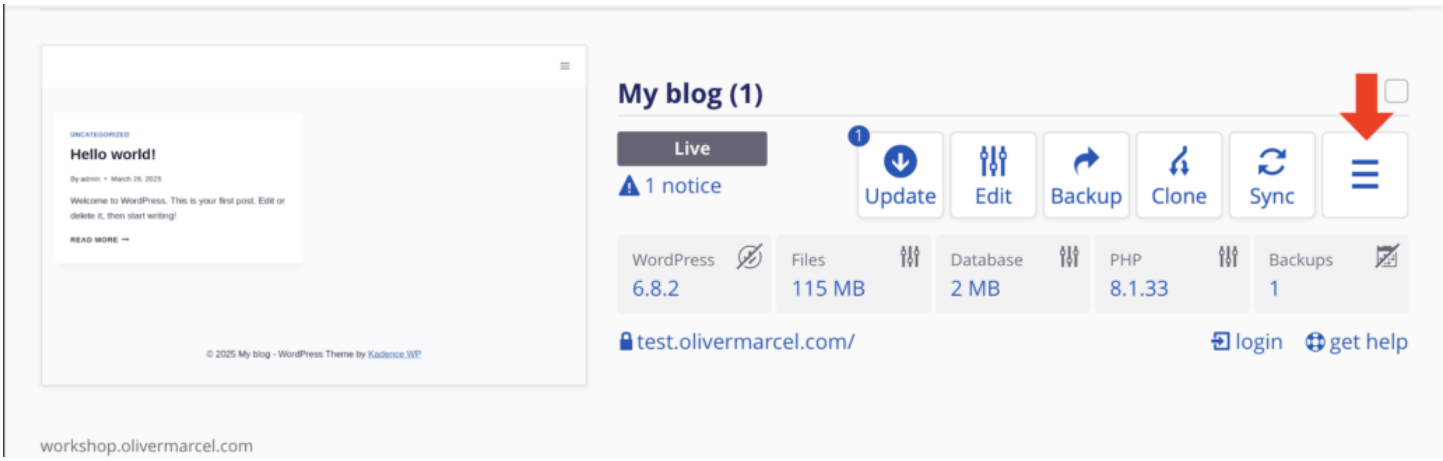

Fig. 1

Step 2: Uninstalling the WordPress Application

After clicking on "My Apps" you will be brought to a page with several options for your site.

Be sure to double check you are looking at the site you want to uninstall. Once you are sure, click the **three lines menu button** on the rightmost side of the screen and then click the red **X Uninstall** button (Fig. 2 & 3).

Next you will be brought to a page that confirm that you understand uninstalling this application will **delete all of the files, directories, databases, tables associated with the application.** Once you've confirmed this, click the bottom right button labeled **X Uninstall**.

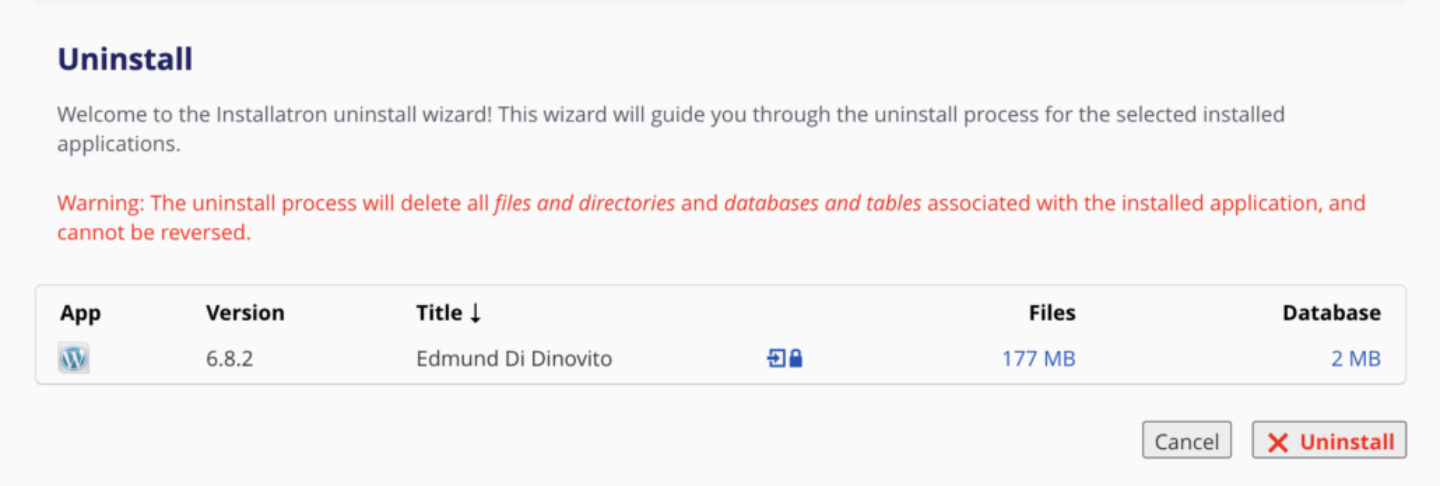

Fig. 3

Uninstalling the Application

After you click the **X Uninstall** button as shown in Figure 3, you will be redirected to your installed applications page. However, you will see that a loading bar has replaced where the URLs to your application once was. The loading time will depend on how much space your application was taking up, but could take about a minute or two.

Step 3: Looking at Your Applications

To fully ensure that your application has been uninstalled, return to your cPanel and click **My Apps** again. The application that you have uninstalled will no longer be shown, which means that you have successfully uninstalled it!
